

Essentials Pro

A GUIDE TO GETTING STARTED WITH ATI ESSENTIALS PRO

Dose equal amounts of ATI Essentials Pro #1 and #2, based on your tank makeup:

ATI Essentials Pro can be dosed either straight from the bottle or diluted. Dilution tends to offer a little more protection from overdose should you end up with a siphon or other accidental overdose. If you choose to dilute the product we recommend 1 parts Essentials Pro to 4 parts water.

1

Aquarium:

Few Coral; New Aquariums

Low Demand (Soft Corals, Anemones)

Mixed Reef (Soft, LPS, SPS)

Heavy Demand (SPS, Clams)

Dosage at full concentration

1 ml per 25 gallons

2 ml per 25 gallons

5 ml per 25 gallons

10 ml per 25 gallons

Dosage at 1:4 dilution

5 ml per 25 gallons

10 ml per 25 gallons

25 ml per 25 gallons

50 ml per 25 gallons

2

Test alkalinity at the same time every day.

The goal is to find a stable KH value that lands between 7-8.*

It does not matter if it is 7.1 or 7.9, as long as the KH value remains the same.

If your alkalinity goes up – lower dose of both ATI Essentials Pro.

If your alkalinity goes down – raise dose of both ATI Essentials Pro.

3

Dose and test daily until alkalinity stabilizes.

4

As you continue using ATI Essentials Pro, perform a full analysis using ATI Labs every 2-3 months.

5

If necessary, adjust individual elements using the ATI Elements system by following your ATI Labs recommended dose.

* If you need assistance achieving a KH value between 7.0 and 8.0 prior to starting ATI Essentials Pro, please email customer@atinorthamerica.com
